About This Document:

This manual has been compiled by Jefferson Tools and is an integrated part of the product with which it's enclosed and should be kept with it for future reference. Please read all of the information supplied in this User Manual before operating this product.

This manual describes the purpose for which the product has been designed and contains all the necessary information to ensure its correct and safe use. We recommend that you read the information supplied before carrying out any maintenance or repair. By following all the general safety instructions contained in this manual you will help to ensure operator safety and extend the potential life span of the equipment.

All photographs and drawings in this manual are supplied by Jefferson Tools to help illustrate the operation of the product. Whilst every effort has been made to ensure accuracy of information contained in this manual our policy of continuous improvement determines the right to make modifications without prior warning.

The information contained in this Instruction Manual is designed to assist you in the safe operation and maintenance of the equipment. Some illustrations in this Instruction Manual may show details or attachments that differ from those on your own model. Contact your nearest Jefferson Dealer if you are unsure about any information included in this manual or require any additional information about the safe use, operation maintenance, or repair of this equipment.

Introduction:

This equipment has been designed for drilling large or small holes in metal, wood, plastic, etc.

Before attempting to use this product, please read this manual thoroughly and follow the instructions carefully. In doing so you will ensure the safety of yourself and that of others around you and will help to ensure long and reliable service from the equipment.

Specifications:

A	Max Drilling Diameter	32mm (1/1-4")
	Motor Power	1500W
	Chuck Capacity	5-20mm
	Input Voltage - Frequency	230V - 50Hz
B	Spindle Travel	120mm
	Number of Speeds	12
	Speed 50Hz	150-2450R.P.M.
C	Spindle Taper	MT4
D	Max. distance from spindle axis to surface of column	255mm
E	Max. distance from spindle end to surface of table	745mm
F	Max. distance from spindle end to surface of base	1205mm
	Swing	510mm
	Table Size	420X480mm
	Base Size	575X425mm
G	Column Diameter	92mm
H	Height	1710mm
	NW/GW	125/130kg

Safety Information:

Warning: this symbol is used throughout the instructions whenever there is a risk of personal injury. Ensure that these warnings are read and understood at all times. When using electric tools, basic safety precautions should always be followed to reduce the risk of fire, electric shock and personal injury: You should not operate this machine unless you are thoroughly familiar with drilling machines and drilling techniques. If there is any doubt whatsoever you should consult a qualified person.

Please read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury. Store this instruction manual in a safe place for future reference.

General Safety

- Always ensure that air can circulate around the machine and that the air vents are unobstructed.
- Always keep work area clean & tidy. Cluttered work areas and benches increase the risk of accidents and injury.
- Never over-reach. Maintain a balanced footing at all times.
- Never use or store this equipment in a wet/damp environment or expose to rain.
- Keep untrained personal, children and pets away from the work area.
- Never operate a machine when under the influence of alcohol, drugs or medication.
- Always ensure the workplace is well lit. Ensure that lighting is placed so that you will not be working in your own shadow.
- Do not use tools in the presence of flammable liquids or gasses.
- Stay alert at all times, watch what you are doing, use common sense and do not operate the tool when you are tired.

Safety Information: (continued)

Equipment Safety

- Always keep guards in place and in clean, working order. A guard or other part that is damaged should be properly repaired or replaced using Jefferson approved parts.
- Don't force the machine or use it for purposes other than it was designed for. Do not modify the equipment to improve performance or exceed the specified rated speed.
- Remove any adjusting keys or wrenches before using the equipment.
- Always disconnect the machine from the power supply before carrying out any servicing or changing accessories.
- Check the alignment and condition of all moving parts before use. Do not use if any parts are damaged or worn.
- Never remove the cover panel unless the machine is disconnected from the power supply, and never use the machine with the cover panels removed.
- Guard against electric shock. Avoid body contact with earthed or grounded surfaces.
- This equipment is designed for use in dry, indoor working environments with suitable ventilation.
- Avoid accidental starting by making sure the power switch is off before plugging in the power cable.
- Never operate the machine until it is completely assembled and you have read and understood this entire manual.
- Always use clamps or a drill vice bolted to the table, to hold the work. The workpiece should never be held with bare hands.
- Always shut off the power & remove the drill bit before leaving the machine. Never leave the drill unattended whilst it is running.
- Always use the correct drilling speeds for the drill size and the type of material being drilled.
- Always remove and store the drill bits when you have finished working with the equipment.
- Never attempt to drill into a workpiece that does not have a flat surface unless a suitable support is used.
- Always stop the drill before removing workpieces, work supports or swarf from the table.
- Keep drills sharp and clean for best and safest performance.
- Adjust the table or depth stop where necessary to avoid drilling into the table surface.
- Always be sure that the drill bit is securely locked in the chuck.
- Never assemble or set up any work on the table while the drill is running.
- Always ensure the table lock is tight before starting the drill.
- Keep the handles dry, clean and free from oil and grease.
- Always keep hands and fingers away from the drill bit when the equipment is connected to the power supply.
- Do not operate the equipment if you are tired or under the influence of alcohol, drugs or medicine.
- Keep children and animals away from the equipment and work area at all times.

Dust generated from certain materials can be hazardous to your health. Always operate the drill in a well-ventilated area. Use a dust collection system if possible. Use a dust mask or other suitable respiratory protection as required. The use of any accessory or attachment other than one recommended in this instruction manual may present a risk of personal injury.

Protective Clothing

- Always wear the appropriate clothing and personal protection equipment
- Non-slip footwear and safety boots is recommended.
- Wear a protective hair covering or tie back long hair.
- Always wear safety glasses and ear protection.
- Wear a face mask if drilling into any material which produces dust.
- Do not operate this equipment using loose clothing or other jewellery may get caught in moving parts.

Electrical Safety

- Ensure that you check the equipment thoroughly to ensure it is safe and fit for purpose before each use. It is important that you inspect all plugs, sockets, power cables and electrical fittings for wear and damage and repair or replace any defective components. The risk of electric shock can be minimised by the correct use of the appropriate electrical safety devices.
- We recommend that you fit a **Residual Current Circuit Breaker (RCCB)** in the main distribution board and that a **Residual Current Device (RCD)** is used when operating this equipment.
- The **Electricity at Work Act 1989** includes legislation that places legal implications on employers to ensure the safety of electrical devices in the workplace. The regulations dictate that all portable equipment must be inspected regularly and tested to ensure that it is safe for use. 'Portable equipment' means any electrical item that can be moved and this is often referred to as **Portable Appliance Testing (PAT)**. PAT testing should be carried out regularly on this equipment by trained, authorised personnel, as required by the legislation. The **Health and Safety at Work Act 1974** states that it is the responsibility of the owner of electrical appliances to ensure that both the equipment and working environments are maintained to ensure safe operation at all times.
- Check that all equipment cables are secure, correctly insulated, free from damage, and protected against short circuit and overload before connecting to the power supply. Do not use worn or damaged cables, plugs, sockets or other fittings.
- Ensure that the power supply matches voltage requirements specified on the equipment and that the plug is wired correctly and fitted with the correct fuse. If the electrical fuse blows, ensure it is replaced by an identical type of fuse with the same rating. maintaining, cleaning, replacing or checking any parts.
- Ensure the power cable is kept away from heat, oil and sharp edges.
- Always disconnect the equipment from the power source before servicing, inspecting, adjusting or changing accessories.

Unpacking & Working Environment

The equipment is delivered with the components shown above. After unpacking, check the parts against this list and check for any damage caused during transit. If any damage is found contact your Jefferson Dealer and arrange a replacement.

Do not discard the packaging until the machine is assembled. The packaging consists of cardboard and appropriately marked materials which can be sent to a suitable re-cycling centre.

To protect the machine parts from moisture, a protective coating of light machine oil will have been applied to the outside surfaces. Remove any excess with a paper towel.

Take care when lifting the heavy head assembly. Before use, the machine must be mounted, and securely bolted, to a strong, heavy workbench, of sufficient height that you will be standing upright when working.

Ensure the work place is adequately lit, and that you will not be working in your own shadow.

Always ensure the bench drill is disconnected from the power supply during assembly, setup, adjustment and servicing. Never leave the equipment running while unattended.

Assembly Instructions

Base & Column

1. Carefully remove contents from the packing box.
2. Select a firm, level surface on which to assemble the bench drill.
3. Select the base (**Fig.1**) and align the column support over the large hole (**Fig.2**).
4. Align the holes in the column support with those in the base and secure in place using the bolts and washers. (**Fig.5**).
5. Use a spanner to securely tighten all bolts (**Fig.3**). We recommend mounting the base to stable surface for proper support.
6. Slide the column into the column support (**Fig.4**).
7. Secure in place with 2 grub screws using the hex key (**Fig.5**).

Rack & Table

1. Fix the rack on the table support as shown (**Fig.6**).
2. Assemble the support and rack onto the column, ensuring the rack is positioned on the right side of the column (when viewing the product from the front) (**Fig.7**).
3. Slide the rack all the way down until it locates into the lower column support (**Fig.8**).
4. Slide the collar, tapered side facing down, over the column until it locates the rack.
5. Tighten the grub screw on upper collar (**Fig.9**).
6. Fix table adjustment handle on the support (**Fig.10**).
7. Assemble table onto table support, tighten in place with table lock (**Fig.11**).

Main Housing

1. Lift the main housing and slide it down onto the column as far as it will go (**Fig.12**).
2. Ensure the spindle aligns with the table and base before securing the housing.
3. To secure in position tighten the grub screws on the left and right hand sides of the housing (**Fig.13**).
4. To fit the feed wheel handles, screw them into feed wheel hub (**Fig.14**).
5. For some cast iron feed handle, tighten the 3 grub screws to wheel hub (**Fig.15**) then fix the plastic case on cast iron feed handle as shown (**Fig.16**).

Chuck & Arbor

1. Before any assembly, ensure the chuck jaws are wound all the way up (inside the chuck) to prevent them from damage (**Fig.17**).
2. Tighten Philip's head screws of the chuck guard to quill shaft (**Fig.18**).
3. Fit the tapered arbor end into the chuck by hand, using reasonable force (**Fig. 19**).
5. Once it is located a firm tap on the underside of the chuck with a soft hammer is required to secure it. The chuck & arbor are installed correctly if they cannot be pulley out with hand force (**Fig. 21**).

Settings & Adjustments

Table Height Adjustment

1. Loosen the table support lock (**Fig. 22**).
2. Rotate the table adjustment handle to set the desired table height and tighten the table lock to secure the table in position (**Fig. 23**).

Table Bevel Adjustment

1. The bevel angle is adjusted by loosening the bolt that is located underneath table support with a spanner (**Fig. 24**).
2. After tilting the working table (**Fig. 25**), to appropriate position, re-tighten the bolt to secure its position.

Caution: When the table is angled/tilted, ensure the workpiece is clamped to the table.

Using Straight Shank Drill Bits

1. Using the chuck key, loosen the jaws of the chuck by rotating in an anti-clockwise direction (**Fig. 26**).
2. Insert the drill bit into the chuck (**Fig. 27**).
3. While holding the drill bit in one hand rotate the top collar of the chuck in a clockwise direction. Insert the chuck key into 1 of the 3 rotating holes and tighten until the drill bit is secure (**Fig. 28**).

Using Straight Shank Drill Bits

1. To use Morse taper bits, remove chuck and arbor.
2. Turn arbor until the tang aligns with the slot in the quill (**Fig. 29**).
3. Insert the drill key into the slot and tap firmly with a metal hammer until it is released (ensure the chuck jaws are wound all the way up to prevent any damage (**Fig. 30**)).
3. Place taper bit into the spindle hole, twisting and pushing upward until the bit is snug (**Fig. 31**).
4. Place block of wood on the table and raise up table until the tapered bit is firmly into the spindle.

Pre-Setting The Drilling Depth

To set the depth of the hole, adjust the depth stop as follows:

- Loosen depth stop lock knob by turning in an anti-clockwise direction see (Fig.32.1)
- Rotate the to the desired depth, then tighten the half-wing bolt (Fig.32.2)

To hold the spindle (and bit) at a desired depth:

- Loosen depth stop lock knob, turn feed wheel handle to lowest point (Fig.32.3).

Rotate depth scale to desired depth and re-tighten the depth stop lock knob. workpiece is clamped to the table.

Fig.32.1

Fig.32.2

Fig.32.3

Adjusting Speed Settings

You can change the drill press speed by adjusting the belt on the pulley system. Refer to the chart inside the pulley cover for the various speed configurations available for your model.

- Release the belt tension locking knobs located on either side of the main housing (Fig.33.1).
- Once the tension is released, the belt tension handle can be used to move the motor pulley closer to the idler pulley (Fig.33.2).
- The belt is removed by lifting it over the lip of the pulley while rotating the pulley simultaneously (Fig.33.3).
- After re-adjusting the belts, use the belt tension handle to move the motor pulley further away from the idler pulley. When the desired position is achieved use the locking knobs to secure the pulleys in place (Fig.33.4).
- Proper belt tension is achieved when the measured deflection (by pushing in the centre of the belt) is approx. 5mm (Fig.33.5).

Fig.33.1

Fig.33.2

Fig.33.3

Fig.33.4

Operation Guide

Turning the Equipment On And Off

Note: The pulley cover must be closed to operate the drill.

- Turn the bench vice on by pressing the green button on the switch as shown (Fig.34).
- Switch the bench vice off by pressing the red button on the switch. (Fig.35).
- Secure your workpiece to the table if possible (for example use a vice or a set of clamps).

Fig.34

Fig.35

Fig.33.5

Drilling

1. Ensure the bench drill is switched off and disconnected from the power supply.
2. Loosen the jaws of the chuck with the chuck key by turning in an anti-clockwise direction and insert the selected drill bit into the as far as it will go.
3. Insert the chuck key into 1 of the 3 locating holes and tighten until the drill bit is secure.
4. Select your drilling depth and secure the depth stop lock knob in position.
5. Turn the bench drill on by pressing the green button on the switch (**Fig.34**).
6. Adjust the table to your desired position.
7. Slowly rotate the feed wheel handles to bring the drill bit down towards the table and into your workpiece.
After drilling a hole, release the feed wheel handles slowly to return the chuck to its original position.
8. Continue the operation until the task is completed.
9. When your work is complete, switch the bench drill off by pressing the red button on the switch.

Maintenance

For maximum performance, it is essential that the bench drill is properly maintained. Always inspect it before use. Any damage should be repaired, and faults fixed immediately. Always remove the plug from the power supply before carrying out any adjustment, servicing or maintenance on this equipment. Contact your nearest Jefferson Dealer if any faults or damage is found.

Monthly Maintenance

1. Check tightness of mounting bolts, and head and column securing set screws.
2. Check the drive belt for wear, and replace if frayed or damaged.
3. Blow out with compressed air, or vacuum clean out, any dust that may have accumulated in the motor fan vents.
4. Apply a thin coat of wax paste or light oil to the table and column, for lubrication, and to help prevent corrosion.
5. If the mains lead is damaged in any way, it should be replaced immediately.

Lubrication

- All bearings are packed with grease at the factory and require no further lubrication.
- Occasionally, lubricate the quill shaft assembly and rack with light oil if required.

After Use

- Remove all swarf from the machine and thoroughly clean all surfaces.
- Components should be kept dry, with machined surfaces lightly oiled.
- Always remove drill bits, and store in a safe place.

Environmental Protection

**PLEASE
RECYCLE**

Recycle any packaging and unwanted materials instead of disposing of them as waste. All tools, accessories and packaging should be sorted, taken to a recycling centre and disposed of in a manner which is compatible with the environment.

When the product becomes completely unserviceable, reaches the end of its working life and requires disposal, drain off any fluids (if applicable) into approved containers and dispose of the product and the fluids according to local regulations.

WEEE Waste Electrical and Electronic Equipment Statement

Information on Disposal for Users of Waste Electrical & Electronic Equipment

This symbol on the product(s) and / or accompanying documents means that used electrical and electronic products should not be mixed with general household waste. For proper treatment, recovery and recycling, please take this product(s) to designated collection points where it will be accepted free of charge.

For private households:

Dispose of this product at the end of its working life and in compliance with the EU Directive on Waste Electrical and Electronic Equipment (WEEE). Contact your local solid waste authority for recycling information for this equipment.

Disposing of this product correctly will help save valuable resources and prevent any potential negative effects on human health and the environment, which could otherwise arise from inappropriate waste handling.

Please contact your local authority for further details of your nearest designated collection point.

Penalties may be applicable for incorrect disposal of this waste, in accordance with your national legislation.

For business users in the European Union:

If you wish to discard electrical and electronic equipment, please contact your dealer or supplier for further information.

Information on Disposal in other Countries outside the European Union:

This symbol is only valid in the European Union. If you wish to discard this product please contact your local authorities or dealer and ask for the correct method of disposal.

RoHS Directive 2011/65/EU

We hereby declare that this equipment has been tested and found to be compliant to RoHS Directive 2011/65/EU of the European Parliament and the Council from 08/06/2011 on restriction of the use of certain hazardous substances in electrical and electronic appliances.

EC Declaration of Conformity

We, Jefferson Professional Tools & Equipment, as the authorised European Community representative of the manufacturer, declare that the following equipment conforms to the requirements of the following Directives:

Directive:	Description:
2014/30/EU (as amended)	Electromagnetic Compatibility
2006/42/EC (as amended)	Machinery Directive
2014/35/EU (as amended)	Low Voltage Directive
2011/65/EU (as amended)	RoHS Directive

Limited Warranty Statement

Jefferson Professional Tools & Equipment, or hereafter "Jefferson" warrants its customers that its products will be free of defects in workmanship or material. Jefferson shall, upon suitable notification, correct any defects, by repair or replacement, of any parts or components of this product that are determined by Jefferson to be faulty or defective.

This warranty is void if the equipment has been subjected to improper installation, storage, alteration, abnormal operations, improper care, air compressor service or repair.

Warranty Period

Jefferson will assume both the parts and labour expense of correcting defects during the stated warranty periods below.

All warranty periods start from the date of purchase from an authorised Jefferson dealer. If proof of purchase is unavailable from the end user, then the date of purchase will be deemed to be 3 months after the initial sale to the distributor.

1 Year

- All Jefferson Bench & Pillar Drills

90 Days

- All replacement parts purchased outside of the warranty period

Important: All parts used in the repair or replacement of warranty covered equipment will be subject to a minimum of 90 days cover or the remaining duration of the warranty period from the original date of purchase.

Warranty Registration / Activation

You can register and activate your warranty by visiting the Jefferson Tools website using the following address: www.jeffersonstools.com/warranty and completing the online form. Online warranty registration is recommended as it eliminates the need to provide proof of purchase should a warranty claim be necessary.

Warranty Repair

Should Jefferson confirm the existence of any defect covered by this warranty the defect will be corrected by repair or replacement at an authorized Jefferson dealer or repair centre.

Packaging & Freight Costs

The customer is responsible for the packaging of the equipment and making it ready for collection. Jefferson will arrange collection and transportation of any equipment returned under warranty. Upon inspection of the equipment, if no defect can be found or the equipment is not covered under the terms of the Jefferson warranty, the customer will be liable for any labour and return transportation costs incurred.

These costs will be agreed with the customer before the machine is returned.

* Jefferson reserve the right to void any warranty for damages identified as being caused through misuse

Warranty Limitations

Jefferson will not accept responsibility or liability for repairs made by unauthorised technicians or engineers. Jefferson's liability under this warranty will not exceed the cost of correcting the defect of the Jefferson products.

Jefferson will not be liable for incidental or consequential damages (such as loss of business or hire of substitute equipment etc.) caused by the defect or the time involved to correct the defect. This written warranty is the only express warranty provided by Jefferson with respect to its products. Any warranties of merchantability are limited to the duration of this limited warranty for the equipment involved. Jefferson is not responsible for cable wear due to flexing and abrasion. The end user is responsible for routine inspection of cables for possible wear and to correct any issues prior to cable failure.

Claiming Warranty Coverage

The end user must contact Jefferson Professional Tools & Equipment (Tel: +44 (0) 1244 646 048) or their nearest authorised Jefferson dealer where final determination of the warranty coverage can be ascertained.

Step 1 - Reporting the Defect

Online Method:

- Visit our website www.jeffersonstools.com/warranty and complete the Warranty Returns form. You can complete the form online and submit it to us directly or download the form to print out and return by post.

Telephone Method:

Contact your Jefferson dealer or sales representative with the following information:

- Model number
- Serial number (usually located on the specification plate)
- Date of purchase

A Warranty Returns form will be sent to you for completion and return by post or fax, together with details of your nearest authorised Jefferson repair centre. On receipt of this form Jefferson will arrange to collect the equipment from you at the earliest convenience.

Step 2 - Returning the Equipment

It is the customer's responsibility to ensure that the equipment is appropriately and securely packaged for collection, together with a copy of the original proof of purchase. Please note that Jefferson cannot assume any responsibility for any damage incurred to equipment during transit. Any claims against a third party courier will be dealt with under the terms & conditions of their road haulage association directives.

Please note: Jefferson will be unable to collect or process any warranty requests without a copy of the original proof of purchase.

Step 3 - Assessment and Repair

On receipt, the equipment will be assessed by an authorised Jefferson engineer and it will be determined if the equipment is defective and in need of repair and any repairs needed are covered by the warranty policy. In order to qualify for warranty cover all equipment presented must have been used, serviced and maintained as instructed in the user manual.

Where repair is not covered by the warranty a quotation for repair, labour costs and return delivery will be sent to the customer (normally within 7 working days).

Note: If the repair quotation is not accepted Jefferson Professional Tools & Equipment will invoice 1 hour labour time at £30 per hour plus return carriage costs (plus VAT).

In cases where no fault can be found with the equipment, or, if incorrect operation of the equipment is identified as the cause of the problem, a minimum of 1 hour labour at £30 per hour plus carriage costs will be required before the equipment will be despatched back to the customer.

Any equipment repaired or replaced under warranty will normally be ready for shipment back to the customer within 7 working days upon receipt of the equipment at an authorised Jefferson Repair centre (subject to part availability). Where parts are not immediately available Jefferson will contact you with a revised date for completion of the repair.
