

PVC FLOOR TILES

- Designed for easy interlocking installation, often not requiring adhesive, which can save time and effort
- Highly durable and resistant to heavy loads, making them ideal for garages where vehicles and heavy equipment are stored
- Resistant to chemicals, oils and other automotive fluids, ensuring longevity and easy maintenance
- Textured surface that provides excellent slip resistance, improving safety in the garage
- Softer and more comfortable surface to stand on compared to concrete, reducing fatigue during long periods of standing
- Thermal and sound insulation, making the garage warmer and quieter
- Easy to clean and maintain; can be wiped or mopped
- Less prone to cracking or breaking compared to ceramic tiles, providing a longer-lasting solution
- Waterproof to prevent issues related to moisture, such as mould or mildew

Corners & Edging

- Ramped corners & edging to finish off exposed tiles safely in doorways or around free standing areas
- They can be fitted quickly and easily in the same way that the tiles interlock creating a safe edge for pedestrians and vehicles to move on and off PVC floor
